GENERAL INFORMATION:

APPLICANT: Nichols, Scott E.

TITLE OF INVENTION: Substitutes for Modified Starches and TITLE OF INVENTION: Latexes in Paper Manufacture FILE REFERENCE: 0357CR

CURRENT APPLICATION NUMBER: US/09/210,361

CURRENT FILING DATE: 1998-12-11

EARLIER APPLICATION NUMBER: 09/007,999

BEARLIER FILING DATE: 1998-01-16

EARLIER FILING DATE: 1995-06-07

EARLIER APPLICATION NUMBER: 09/09/620

EARLIER FILING DATE: 1995-06-07

EARLIER FILING DATE: 1998-01-20

EARLIER FILING DATE: 1998-01-20

RESULT 6 US-09-604-957-4 ; Sequence 4, Application US/09604957 ; Patent No. 6486314

```
GENERAL INFORMATION:
APPLICANT: NICHOLS, Scott E.
FITLE OF INVENTION: Substitutes for Modified Starches and
FITLE OF INVENTION: Latexes in Paper Manufacture
FILE REFERENCE: 0357CR
CURRENT APPLICATION NUMBER: US/09/210,361
CURRENT FILING DATE: 1998-12-11
EARLIER APPLICATION NUMBER: 09/007,999
EARLIER FILING DATE: 1998-01-16
EARLIER APPLICATION NUMBER: 09/478,704
EARLIER APPLICATION NUMBER: 09/478,704
EARLIER FILING DATE: 1995-06-07
                                                                                                                                                                                                                                                                                                                                                                          멼
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Дb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δÃ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyl transferase-B. The monocional antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monocional antibody-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-17565) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Glucosyltransferase; GTFB; transgenic plant; paper sizing; coating composition; glucan; starch; latex; thermoplastic molecule;

The method comprises transforming a glucian in a plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Comprise in paper manufactures for and additions to modified starch comprises in paper manufactures for and additions to modified starch comprises and impart gloss to the paper during coating step.

CC manufacture utilising the glucan produce dby GTF, which utilises the biologically produced input materials, is more cost-effective and comprises and impart gloss to the paper during coating step.

CC properties and impart gloss to the paper during coating step.

Also included are a glucan produced by the GTF mutant, CC an isolated polynucleotide which encodes Pl or P2, or its complementary, CC polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, CC an expression cassette comprising the polynucleotide operably linked to a CC promoter, a vector comprising the expression cassette, host cell CC introduced with the vector, a transgenic plant comprising the vector, a seed or tuber from the transgenic plant, a paper sizing and/or CC coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, CC thermoplastic molecule or their combinations or glucan and starch where CC the glucan is produced in the amyloplast and/or vacuole or a maize line CC glucosyltransferase B or D enzyme, wild-type or mutant and a paper CC comprising the glucan in a plant. The method comprises transforming a glucan in a plant. The method comprises transforming a cc plant cell with the vector, growing the plant and inducing expression of the conditions to produce a regenerated plant and inducing expression of the cribulose biphosphate carboxylase small subunit, waxy, brittle-1 and cl is broduced in the amyloplast or or transit sequence from cribulose biphosphate carboxylase small subunit, waxy, brittle-1 and cl is notediced in the amyloplast of note or a transgenic plant, and glucan in the manyloplast of note or a transgenic plant, and glucan cl is notediced in the amyloplast of note or a transgenic plant, and glucan cl is notediced in the amyloplast of note or a transgenic plant, and glucan cl is notediced in the amyloplast of note or a transgenic plant, and glucan cl is notediced in the amyloplast of note or a transgenic plant.
                                                                                                                                                                                                                                                                                                                                      뮍
                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU980 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly upon the produced by GTF, which utilises are cost-effective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention an isolated protein comprising a glucosyltrans (GTF) B polypeptide having changes at position from I448V, I D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K, D567T/D571K, I D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K779Q/K1014T, Y169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D, N471D/T589D, Changes At positions from T589D, T589E, N471D, N471D
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       16-JAN-1998;

Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions -

laim 36; Page -; 44pp; English.

The invention an isolated protein comprising a glucosyltransferase (GTP) B polypeptide having changes at position from I448V, D457N, D567T, D571K, E014T, D457N/D57TK, D567T/D571K, D667T/D57TK, D667T/D57TK, D667T/D57TK, E014T, I448V/D457N/D567T,D57TK, E014T, GC P567T/D57TK, E014T, I448V/D457N/D567T/D57TK, E014T, GC P567T/D57TK, E014T, I448V/D457N/D567T/D57TK, E014T, GC P567T/D57TK, E014T, I448V/D457N/D567T/D57TK, E014T, GC P567T/D57TK, E014T, GC P567T/D57TK, E014T, I448V/D457N/D567T/D57TK, E014T, GC P567T, E014T, I448V/D457N/D567T, E014T, E014T, I448V/D457N/D567T, E014T, I448V/D457N/D567T, E014T, E014T, I448V/D457N/D567T, E014T, E014T, I448V/D457N/D567T, I448V/D457N/D667T, I448V/D457N/D667T, I448V/D457N/D667T, I448V/D457N/D667T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTPB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTPB sequence appearing as AAU9802 and the information in claim 36.
         The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from 1448V, D457N, D567T, V1014T, D457N/D57T, S7TN/D57TK, D567T/D57TK, D567T/D57TK, D147T, T1448V/D457N/D567T/D57TK/K779Q/K1014T, T148V/D457N/D567T/D57TK/K779Q/K1014T, T169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having Changes at positions from T589D, T589E, N471D, T471D/T589D, and N471D/T589E. Also included are a glucan produced by the GTF mutant, an isolated polynucleotide which encodes P1 or P2, or its complement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              coating composition;

The vector is useful for producing a glucan in a plant. The method comprises transforming a comprising the glucan (paper sizing/coating agent). The vector is useful comprising the produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the crepancy of the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the crepancy of the plant and inducing expression of the colorophyll AB binding protein to produce a transit sequence from the produced in the amyloplast of potato or the vacuole of sugar beet. CC glucans are useful as substitutes for and additions to modified starch and placen is produced in the amyloplast of potato or the vacuole of sugar beet. CC manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and centre sequence is not shown in the specification but thermoplastic corrected by the indexer using the GTFB sequence appearing as AAU98027 was created by the indexer using the GTFB sequence appearing as AAU98027

The method comprises transforming a glucosyltransferace B or D enzyme, wild-type or mutant and a paper glucosyltransferace B or D enzyme, wild-type or mutant and a paper glucosyltransferace plant and inducing expression of the conditions to produce a regenerated plant and inducing expression of the comprising the glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant and inducing expression of the created by the amyloplast of potato or the vacuole of sugar beet.

CC and lateves in paper manifacture, unlike prior art techniques, which the paper manifacture will be produced by GTF, which utilises biologically produced input materials, is more cost-effective and cenvironmentally friendly. Moreover, glucan in the present sequence is not shown in the specification but the indext is sequence appearing
                                                                                                                                    뮍

Glucosyltransferase B or D protein useful for producing a glucan $\mathbf u$ as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions

Page -; 44pp; English.

The invention an isolated protein comprising a glucosyltransferase (GGTF) B polypepide having changes at position from IA48V, D457N, CC D567T, K1014T, D457N/D57TK, D457N/D57TK, D57T/D57TK/K1014T, 1448V/D457N/D567T/D57TK/K779Q/K1014T, CC D567T/D57TK/K1014T, 1448V/D457N/D567T/D57TK/K779Q/K1014T, CC D567T/D57TK/K779Q/K1014T, 1448V/D457N/D567T/D57TK/K779Q/K1014T, CC D567T/D57TK/K779Q/K1014T, CC D47T/D57TK/K779Q/K1014T, And K779Q or a GFF D polypeptide having CC Changes at positions from T589D, T589E, N47ID, N47ID/T589D, and CC CAM7ID/T589E. Also included are a glucan produced by the GTF mutant, CC D47T/T589E. Also included are a glucan produced by the GTF mutant, CC D47T/T589E. Also included are a glucan produced by the GTF mutant, CC D47T/T589E. Also included are a glucan produced by the GTF mutant, CC D47T/T589E. Also included are a glucan produced by the GTF mutant, CC D47T/T589E. Also included are a glucan produced by the GTF mutant, CC D47T/T589E. Also included are a glucan produced by the GTF mutant, CC D47T/T589E. Also included are a glucan produced in the anyloplase and/or coating the GTF mutant, CC D4T/T589E. Also included in the anyloplase and/or vacuole or a maize line CC D4T/T589E. Also included in the anyloplase and/or vacuole or a maize line CC D5T/T589E. Also included in the anyloplase and/or vacuole or a maize line CC D5T/T589E. Also included in the anyloplase and/or vacuole or a maize line CC D5T/T589E. Also included in the anyloplase and/or vacuole or a maize line CC D5T/T589E. Also included in the anyloplase included in the plant and a paper of plant cell with the vector, growing the plant cell under plant growing a glucan in a plant. The method comprises transforming a plant cell with the vector prowing the plant and inducing expression of the regenerated plant, where the vector contains a transfer clude in the anyloplase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce the glucan in the main contains a transfer containt, and glucan in the contains a transfer containt

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.

CC D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K, CC V165A/X170A/X171A, and K779Q or a GTF D polypeptide having C rhanges at positions from T589D, T589E, M47LD/T589D, and K779Q or a GTF D polypeptide having CC Anyges at positions from T589D, T589E, M47LD/T589D, and isolated polynuclectide which encodes P1 or P2, or its complementary CC polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, C an expression cassette comprising the polynucleotide operably linked to a C promoter, a vector comprising the polynucleotide operably linked to a c promoter, a seed or tuber from the transgenic plant comprising the vector, a seed or tuber from the transgenic plant, a paper sizing and/or c coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line c deficient in starch biosynthesis, transformed with a gene encoding a glucan produced with a gene encoding a glucan plant. The method comprises transforming a glucosyltransferase B or D enzyme, wild-type or mutant and a paper comprising the glucan in a plant. The method comprises transforming a c plant cell with the vector, growing the plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the created plant, where the vector contains a transforming a c plant cell with the asyloplast of potato or the vacuole of sugar beet. The produced in the amyloplast of potato or the vacuole of sugar beet. The produced in paper manufacture. Unlike prior art techniques, which creating the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and convironmentally friendly. Moreover, glucans also exhibit thermoplastic corrobraties and impart coloss to the paper during soething step.
                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 9

The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                              Glucosyltransferase; GTFB; transgenic plant; paper sizing; coating composition; glucan; starch; latex; thermoplastic molecule; amyloplast; vacuole; paper manufacture; mutant; mutein.

Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        comprising the glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transit sequence from ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and

The invention an isolated protein comprising a glucosyltransferase (CFTF) B polypeptide having changes at position from 1448V, D457N, CC D567T, D571K(K1014T, 1448V)A57N/D571K, D567T/D571K(K1014T, 1448V)A57N/D57TK, D567T/D571K(K1014T, 1448V)A57N/D57TK/D571K(K1014T, 1448V)A57N/D57TK/D571K(K1014T, 1448V)A57N/D57TK/D57TK/T90/K1014T, and K7790 or a GTT D polypeptide having changes at positions from 7889D, 7589E, M471D, M471D/T589D, Also included are a glucan produced by the GTF mutant, an expression cassette comprising the polymocleotide operably linked to a promoter, a vector comprising the polymocleotide operably linked to a promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant, a paper sixing and/or vector, a seed or tuber from the transgenic plant, a paper sixing and/or vector, a seed or tuber from the transgenic plant, a paper sixing and/or vector, a seed or tuber from the transgenic plant, a paper sixing and/or vector, a seed or tuber from the transgenic plant, a paper sixing and/or vector, a seed or tuber from the transgenic plant, a paper sixing and/or vector a seed or tuber from the transgenic plant, a latex, therefore the glucan is produced in the amyloplast and/or vectorle or a maize line of the glucan in a plant. The method comprises transforming a glucosyltransferase B or D enzyme, which type or mutant and apaper glucosyltransferase B or D enzyme, which type or mutant and apaper complising the glucan in a plant. The method comprises transforming a plant produced in the amyloplast of portation and inducing expression of the complying a binding protein to produce a transgenic plant, and glucan complying the binding protein to produce a transgenic plant, and glucan the present sequence from the vector in paper manifacture. Unlike prior art techniques, which complying the glucan in the substitutes for and additions to modified starch for the vector in paper manifacture. Unlike prior art techniques, which can be present sequence a snot shew that in co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       16-JAN-1998;

The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from I448V, D457N, D567T, D457N/D571K, D567T/D571K/K1014T, L448V/D457N/D571K, D567T/D571K/K1014T, I448V/D457N/D571K, D567T/D571K/K71014T, I448V/D457N/D571K, D567T/D571K/K779Q/K1014T, CC D567T/D571K/K1014T, I448V/D457N/D657T/D571K/K779Q/K1014T, CC PARTYD571K/K1014T, I448V/D457N/D657T/D571K/K779Q/K1014T, CC PARTYD571K/K7101AT, And K779Q or a GTF D polypeptide having changes at positions from T589D, N471D, N471D/T589D, and CC Polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, CC polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, CC an expression cassette comprising the polymucleotide operably linked to a promoter, a vector comprising the expression cassette, host cell cC introduced with the vector, a transgenic plant comprising the condition of the mutant GTF, wild type or, starch, host cell with a gene encoding the mutant GTF, wild type or, starch where the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a cc plant cell with the vector, growing the plant and inducing expression of the regenerated plant, where the vector contains a transit sequence from cc polymucleotide for a time sufficient to produce the glucan in the cc regenerated plant, where the vector contains a transit sequence from cid places in paper manufacture. Unlike prior art techniques, which cc and latexes in paper manufacture. Onlike prior art techniques, which cc and latexes in paper manufacture. Onlike prior art techniques, which cc input materials that produce chemical effluents, paper

Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S. mutans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
  The invention an isolated protein comprising a glucosyltrani (GTF) B polypeptide having changes at position from 1448V, 1 D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K, D457N/D571K, D457N/D571K, D457N/D571K/K1014T, D457N/D57N/D571K/K779Q/K1014T, Y148V/D457N/D57T/D571K/K779Q/K1014T, Y169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D, N471D/T589D,
                                                                                                                                                                                                                                                                      Glucosyltransferase B or D protein useful for producing as substitutes for and additions to modified starch and
                                                                                                                                                                                                                                                                                                                                                    WPI; 2002-414332/44

The vector is usefil for producing a glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant and inducing expression of the conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the reflucan produced in the amyloplast of potato or the vacuole of sugar beet. Clucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which creditive and subcrities in the produce deficient to produce a the sugar beet. Clucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which creditive and paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic corrections and innert closs to the naner during costing coating sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Loc

The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This

Coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, CC thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line CC glucosyltransferase B or D enzyme, wild-type or mutant and a paper CC comprising the glucan in a plant. The method comprises transforming a glucon in a plant. The method comprises transforming a cC plant cell with the vector, growing the plant and inducing expression of the polymuclectide for a time sufficient to produce the glucan in the CC regenerated plant, where the vector contains a transit sequence from CC ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and CC chlorophyll AB binding protein to produce a transgeric plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. CC Glucans are useful as substitutes for and additions to modified starch cand latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper CC biologically produced input materials is more cost-effective and CC properties and impart gloss to the paper during coating step.

The present sequence represents GTFC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K779Q/K1014T, Y169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D, N471D/T589D, and N471D/T589E. Also included are a glucan produced by the GTF mutant, an isolated polynucleotide which encodes P1 or P2, or its complementary polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, an expression cassette comprising the polynucleotide operably linked to a promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the vector, a seed or tuber from the transgenic plant, a paper sizing and/cr

      Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bacteriol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOUGHT TO PLAY A KEY ROLE IN THE DEVELOPMENT OF THE DENTAL PLAQUE BECAUSE OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl}(N) = D-fructose + {(1,6)-alpha-D-glucosyl}(N+1).

SUBCELLULAR LOCATION: Secreted.

DISEASE: DENTAL CARIES.

MISCELLANBOUS: GTF-I SYNTHESIZES WATER-INSOLUBLE GLUCANS (ALPHA 1,3-LINKED GLUCOSE AND SOME 1,6 LINKAGES), GTF-S SYNTHESIZES WATER-SOLUBLE GLUCANS (ALPHA 1,6-GLUCOSE). GTF-SI SYNTHESIZES BOTH FROMMS OF GLUCONS (ALPHA 1,6-GLUCOSE).
                                                                                                                                                                                                                                                                                                                                                                                            SIMILARITY: TO OTHER GLUCOSYLTRANSFERASES AND SOME BINDING PROTEIN FROM S.MUTANS.
SIMILARITY: Contains 16 cell wall binding repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FORMS OF GLUCANS.
